

Name: _____

Date: _____

Amira's group was testing powders for science, but two jars had lost their labels. One powder was supposed to be baking soda and the other was salt. They looked the same. If the group mixed up the jars, the fizzing test would not make sense, and their chart would be wrong. They had already started the chart, so a wrong label would ruin every row.

Amira did not guess. She put a spoon of each powder into its own cup and added a splash of vinegar to each. The first cup sat still. The second cup foamed. Ms. Brooks had said baking soda fizzes in vinegar and salt does not. Amira wrote the result before she trusted her memory. She waited until the foam settled before she called the quiet cup salt.

She taped new labels on the jars and set them on opposite sides of the tray. The group ran the real test with the jar that had foamed. Their chart matched what they had seen. Amira kept the vinegar cup as the proof until the labels were dry. Nobody reached for the quiet jar again.

Fill in the circle next to the best answer.

1. What is the problem with the jars?

- ☐ A. Ms. Brooks cancels the fizzing test.
- ☐ B. The vinegar bottle is empty.
- ☐ C. The chart is already finished and every row is correct.
- ☐ D. The labels are gone, so salt and baking soda look the same.

2. How does Amira tell the powders apart?

- ☐ A. She throws both jars away and starts over.
- ☐ B. She asks another group to trade jars.
- ☐ C. She adds vinegar and watches which cup foams.
- ☐ D. She tastes a spoon of each powder.

3. What does the group use for the real test?

- ☐ A. A mix of both powders
- ☐ B. Only the vinegar, with no powder
- ☐ C. The jar that sat still
- ☐ D. The jar that foamed in vinegar

Name: _____ Date: _____

Noah was about to lead the class song when he opened his chorus folder. The pages were out of order. The second verse came before the first, and the last page was stuck in the middle. If he sang from the folder as it was, he would skip the opening and the class would follow him into the wrong verse.

He did not walk on stage yet. He spread the pages on a chair and found the page numbers in the corners. Page 1 had the title. Page 2 started the first verse. He stacked them in order and slid a paper clip over the corner so they could not shuffle again when he walked.

When the music started, Noah sang the verses in the right order. The class followed him. After the song he numbered a fresh copy in dark pencil, even on the pages that already had small print. The clip stayed on the folder for the next rehearsal too.

Fill in the circle next to the best answer.

1. What is wrong with Noah's folder?

- ☐ A. The song pages are out of order.
- ☐ B. The class does not know the song.
- ☐ C. The paper clip covers the title.
- ☐ D. The chorus folder is missing.

2. How does Noah fix the order?

- ☐ A. He sings the last page first on purpose during the song.
- ☐ B. He asks the class to hum instead.
- ☐ C. He tears out the second verse.
- ☐ D. He stacks the pages by the numbers in the corners.

3. What keeps the pages from getting mixed again?

- ☐ A. A paper clip holds the corner of the stack.
- ☐ B. He leaves the pages spread on the chair.
- ☐ C. The class holds one page each.
- ☐ D. Noah memorizes the song and throws the pages away.

Name: _____ Date: _____

The class terrarium looked foggy, and a puddle sat on the table under one corner. Priya thought the glass had cracked. She ran a finger along the edges and did not find a break. Water was still escaping, and the moss inside was drying out at the edges.

She lifted the lid. It rocked instead of sitting flat. One side was resting on a pebble that had been pushed up from the soil. Priya brushed the pebble back, wiped the rim, and set the lid down again. She pressed each corner. This time the lid did not rock, and no light showed along the rim.

By the next morning the table was dry and the glass was only lightly misty, which Mr. Ellis said was normal. Priya wrote on the job card: Check that the lid sits flat. The moss looked green again, and no new puddle formed under the corner.

Fill in the circle next to the best answer.

1. What problem does Priya notice?

- ☐ A. The moss has been taken out of the tank overnight.
- ☐ B. Water is leaking from the terrarium onto the table.
- ☐ C. The job card is missing from the wall.
- ☐ D. Mr. Ellis cracked the glass on purpose.

2. Why doesn't the lid sit flat?

- ☐ A. The table is too wet to hold it.
- ☐ B. A pebble is holding up one side.
- ☐ C. The glass is cracked along the bottom.
- ☐ D. Priya leaves the lid off all night.

3. How is the leak stopped?

- ☐ A. Priya moves the pebble and reseats the lid.
- ☐ B. She adds more water to the puddle.
- ☐ C. Mr. Ellis tapes the crack she found.
- ☐ D. She throws the terrarium away.

Name: _____ Date: _____

Diego had borrowed the class camera to photograph the bean bed for the garden report. When he loaded the pictures, every shot showed the tomato bed instead. The beans were the plants his group had measured. A report with the wrong photos would mix up the data his group had spent two weeks collecting.

He checked the time on the pictures. They were from yesterday, when another group had used the camera and forgotten to clear the card. Diego's own shots were not there because the card had been full. He told Ms. Alvarez before he deleted anything, because yesterday's pictures still belonged to the other group.

At lunch Ms. Alvarez cleared yesterday's photos onto her computer, and Diego reshot the bean bed. He took one close photo of the leaves and one of the measuring stick beside the row. The report finally matched the plants his group had studied, and the stick in the photo proved the scale.

Fill in the circle next to the best answer.

1. What is wrong with Diego's pictures?

- ☐ A. Ms. Alvarez deletes the bean measurements.
- ☐ B. The measuring stick is lost in the tomatoes.
- ☐ C. The camera will not turn on.
- ☐ D. They show the tomato bed instead of the beans.

2. Why are Diego's shots missing?

- ☐ A. He photographed the beans and then erased them.
- ☐ B. The card was full of another group's photos.
- ☐ C. The report did not need pictures.
- ☐ D. The bean bed was planted that same morning.

3. How does Diego fix the report?

- ☐ A. He clears the card with Ms. Alvarez and reshoots the beans.
- ☐ B. He measures the tomatoes and changes his bean data.
- ☐ C. He leaves the pictures out of the report.
- ☐ D. He labels the tomato photos as beans.

Name: _____ Date: _____

The class play used tape marks so each actor knew where to stand. On the morning of the dress rehearsal, the marks had been peeled up. A janitor had cleaned the floor. Without the marks, people drifted into one another's spots, and the opening scene looked crowded and confused.

Lila found the old diagram in the prompt book. It showed three X marks: one by the left curtain, one center, and one a step from the table. She and Omar measured with a meter stick and laid new tape. They pressed the ends down hard so a shoe would not catch them and peel them up again.

They ran the opening once. Each actor landed on a mark, and the scene had room to breathe. Lila circled the diagram and wrote Do not mop over the tape on a note for the janitor. The marks were still there at the show, right where the diagram said they should be.

Fill in the circle next to the best answer.

1. What is missing at rehearsal?

- ☐ A. The tape marks that show where actors stand
- ☐ B. The prompt book with the lines
- ☐ C. Omar's costume for the opening
- ☐ D. The meter stick from the classroom

2. How do Lila and Omar know where to put new tape?

- ☐ A. They guess and hope the scene looks better.
- ☐ B. They copy marks from a different play.
- ☐ C. They ask the janitor to remember the spots.
- ☐ D. They follow the diagram in the prompt book.

3. What does Lila do so the marks will not be cleaned away?

- ☐ A. She cancels the show.
- ☐ B. She hides the diagram in her pocket.
- ☐ C. She leaves the janitor a note about the tape.
- ☐ D. She peels the tape up after rehearsal.

Name: _____ Date: _____

The classroom sink filled instead of draining. Rosa had just rinsed paint cups, and the water climbed toward the rim. If it spilled, paint water would run onto the floor. She turned the faucet off and did not reach into the drain with her fingers. Paint water on the floor would be slippery.

She told Mr. Cole. He shone a light and found a wad of paper towel stuffed in the opening. Rosa held a tray while he lifted the towel out with tongs. Water gurgled down. The sink was usable again, but the towel had almost caused a flood of paint water.

Rosa taped a small sign above the faucet: Towels go in the bin, not the sink. She dropped the wet towel in the trash herself. The next painter saw the sign and used the bin. The sink stayed clear for the rest of the day.

Fill in the circle next to the best answer.

1. What is happening to the classroom sink?

- ☐ A. It fills because a paper towel is stuck in the drain.
- ☐ B. Mr. Cole removes the sign above it.
- ☐ C. Paint cups are missing from the tray by the sink.
- ☐ D. The faucet will not turn on at all.

2. Why doesn't Rosa reach into the drain?

- ☐ A. She gets Mr. Cole, who uses tongs and a light.
- ☐ B. She already pulled the towel out by hand.
- ☐ C. The sign tells her to leave the water running.
- ☐ D. The sink drains before she can look.

3. How does Rosa try to stop the clog from happening again?

- ☐ A. She stuffs a fresh towel into the drain.
- ☐ B. She turns the faucet on and walks away.
- ☐ C. She hides the trash bin under the sink.
- ☐ D. She posts a sign that towels belong in the bin.

Name: _____ Date: _____

Jade's group almost missed the start of the assembly. The classroom clock said they had ten minutes, but the hall was already full when they arrived. Something about the time was wrong. If they trusted that clock again, they would be late for the bus dismissal too.

Jade compared the classroom clock with the office clock while Ms. Patel watched. The classroom clock was ten minutes fast. It had been set that way after a power blink and never corrected. Jade wrote both times on a sticky note so the difference was easy to see.

Ms. Patel reset the classroom clock to match the office. Jade stuck the note on the board until the new time had been checked at lunch. The hands matched. The group lined up for the bus when the office clock, not the old fast one, said it was time.

Fill in the circle next to the best answer.

1. What problem does the fast clock cause?

- ☐ A. Ms. Patel cancels the sticky note.
- ☐ B. Jade's group almost misses the assembly.
- ☐ C. The bus leaves ten minutes early every day.
- ☐ D. The office clock stops during a power blink.

2. How does Jade find out what is wrong?

- ☐ A. She adds ten minutes to the bus schedule only.
- ☐ B. She decides the assembly started early on purpose.
- ☐ C. She compares the classroom clock with the office clock.
- ☐ D. She unplugs the office clock.

3. How is the problem fixed?

- ☐ A. They skip dismissal so the times will not matter.
- ☐ B. Ms. Patel resets the classroom clock to match the office.
- ☐ C. Jade moves the office clock ten minutes ahead.
- ☐ D. The group ignores every clock in the building.

Name: _____ Date: _____

Owen's seed tape was supposed to make carrots grow in a straight row with space between them. When he held the tape up to the window, the seeds were clumped in spots and missing in others. Crowded carrots would twist and stay small. He did not want to plant a row he would have to thin later.

He checked the packet. It said two inches apart. Owen's clumps were much closer than that. He peeled the crowded seeds off carefully and made a new tape. He used a ruler to leave a gap the width of two fingers, then pressed each seed under a fresh bit of tape.

The new tape showed an even dotted line. Owen planted it in the sunny row and covered it with a thin layer of soil. He wrote the spacing on the stake. The seeds were no longer fighting for the same spot.

Fill in the circle next to the best answer.

1. What is wrong with Owen's seed tape?

- ☐ A. The ruler is too short to measure two inches.
- ☐ B. The seeds are clumped instead of spaced apart.
- ☐ C. The packet says not to plant carrots.
- ☐ D. The sunny row is already full of tape.

2. How does Owen know the spacing is wrong?

- ☐ A. The packet says two inches, and his clumps are closer.
- ☐ B. The old tape already grew into plants.
- ☐ C. A teacher tells him the carrot seeds should all touch.
- ☐ D. He plants the clumps and waits to see.

3. What does Owen do next?

- ☐ A. He throws the seeds on top of the soil.
- ☐ B. He plants the crowded tape anyway.
- ☐ C. He writes the wrong spacing on the stake.
- ☐ D. He rebuilds the tape with even gaps and plants it.

Name: _____ Date: _____

The reading nook was Andre's favorite spot until the class started using the door beside it. Every time someone entered, the rug readers lost their place. Andre's book was a mystery, and he kept forgetting who the suspect was. Quiet reading was not quiet anymore.

He asked Ms. Ortiz if the rug could move. Together they measured a corner away from the door, under the window and beside the low shelves. Andre and two classmates carried the rug, then the pillows, then the book bin. They left a path so nobody would trip on the corner.

Andre tried a page. He could hear the door, but it was far enough that the words stayed in his head. Ms. Ortiz put a small sign on the shelf: Reading nook. The mystery made sense again because the nook was no longer in the traffic.

Fill in the circle next to the best answer.

1. Why is the reading nook a problem?

- ☐ A. It is beside a busy door, so readers lose their place.
- ☐ B. The rug is too small for the pillows.
- ☐ C. Ms. Ortiz locks the window corner.
- ☐ D. Andre finished the mystery and has no other book to read.

2. What does Andre do before anyone moves the rug?

- ☐ A. He reads in the hallway instead.
- ☐ B. He blocks the classroom door with all of the pillows.
- ☐ C. He asks Ms. Ortiz and they measure a quieter corner.
- ☐ D. He tells readers to stop using the nook.

3. Why does the new spot work?

- ☐ A. The mystery gets shorter once it moves to the new corner.
- ☐ B. The sign tells people to talk there.
- ☐ C. It is away from the door, so the noise is farther off.
- ☐ D. Students stop coming into the room.

Name: _____ Date: _____

The class pencil sharpener whirred and then stuck. Luis's pencil would not go in, and shavings packed the little window. The next three students were waiting with dull points. If everyone forced a pencil, the blades could jam worse.

Luis unplugged it before he opened anything. He carried it to the trash, slid the shaving case off, and dumped the packed shavings. A broken lead was wedged against the blades. He tapped it out with the end of his pencil, not his finger. Then he clicked the case back on.

He plugged the sharpener in and tried his pencil. It spun cleanly and left a sharp point. Luis showed the waiting students the case and said it had to be emptied when the window looked full. The line moved, and nobody forced a stuck pencil.

Fill in the circle next to the best answer.

1. What is wrong with the sharpener?

- ☐ A. It is unplugged and nobody can find the cord.
- ☐ B. Shavings and a broken lead have jammed it.
- ☐ C. The pencils are already sharp.
- ☐ D. Luis dumps the shavings back into the blades.

2. What does Luis do before he opens the case?

- ☐ A. He washes the blades in the sink.
- ☐ B. He unplugs the sharpener.
- ☐ C. He asks the line to force their pencils in.
- ☐ D. He pushes harder on his pencil.

3. How does the story end?

- ☐ A. The blades stay jammed for the rest of the day.
- ☐ B. Luis throws the sharpener in the trash.
- ☐ C. The sharpener works, and Luis tells others to empty it.
- ☐ D. Students stop using pencils.

Name: _____ Date: _____

Nina opened the rabbit food and saw the bowl already heaped. The chart by the hutch said she was the Monday feeder. Someone else had fed Thistle that morning too. Extra pellets could make the rabbit sick, and the class would not know who had doubled the job.

She did not add more. She found yesterday's helper, Ben, who said he had fed Thistle early because he thought Monday was his day. The chart squares for Sunday and Monday looked almost the same in pencil. Nina erased the mix-up and wrote the names in pen, one day each.

She scooped the extra pellets out so the bowl matched the normal line. Thistle ate calmly instead of gobbling a pile. Nina read the new chart to the next helper. One name, one day, and no second breakfast.

Fill in the circle next to the best answer.

1. What is the problem at the hutch?

- ☐ A. Thistle was fed twice because the chart was confusing.
- ☐ B. Nina forgets that Monday is her day.
- ☐ C. The rabbit food jar is empty.
- ☐ D. Ben refuses to help Nina read the feeding chart.

2. What does Nina do with the extra pellets?

- ☐ A. She feeds them to a different class pet.
- ☐ B. She pours more on top of the heap.
- ☐ C. She scoops them out so the bowl is back to normal.
- ☐ D. She leaves the heap for Thistle to finish.

3. How do they keep the mix-up from happening again?

- ☐ A. They stop feeding Thistle on Mondays.
- ☐ B. Ben erases every name from the chart.
- ☐ C. Nina rewrites the chart in pen with one name per day.
- ☐ D. They hide the food so nobody can feed the rabbit.

Name: _____ Date: _____

Hana found the paintbrushes standing in a jar of cloudy water. They had been left overnight, and the bristles were bent into hooks. If the class used them that way, the paint would streak. She did not want to throw away brushes that could still be saved.

Ms. Brooks said to rinse them and reshape the bristles while they were wet. Hana washed each brush until the water ran clear. She smoothed the bristles into a point with her fingers and laid the brushes flat on a towel, not back in the jar. Standing in water was what had bent them.

By afternoon the brushes were dry and straight. Hana put them in the can, bristles up. She added a line to the art jobs: Wash brushes and lay them flat. The next morning the can was full of straight brushes, and the jar was empty.

Fill in the circle next to the best answer.

1. What happened to the paintbrushes?

- ☐ A. The towel stained them a new color.
- ☐ B. They were left in water and the bristles bent.
- ☐ C. Ms. Brooks threw them out before Hana arrived.
- ☐ D. They dried in the can and could not be used.

2. How does Hana reshape them?

- ☐ A. She rinses them and smooths the wet bristles.
- ☐ B. She cuts the bent bristles off.
- ☐ C. She leaves them in the cloudy jar all day.
- ☐ D. She stands them in fresh water overnight.

3. What new job does Hana add?

- ☐ A. Wash the brushes and lay them flat to dry.
- ☐ B. Keep the brushes in water every night.
- ☐ C. Throw away any brush that has been used.
- ☐ D. Hide the towel so no one moves the brushes.

Name: _____ Date: _____

Theo needed the garden tools, but the shed lock would not open. He turned the dial to the numbers on the class card and tugged. Nothing. The group was waiting with empty wheelbarrows, and the soil was dry. A wrong guess could waste the whole work period.

He stopped and read the card the way it was printed, left to right. He had been starting with the last number because that was how his gym lock worked. This lock wanted the first number first. Theo cleared the dial, entered the three numbers in printed order, and pulled.

The lock opened. He hung the card on a nail inside the door, with an arrow showing which number to start with. The group got the tools and watered the row. At the end, Theo locked the shed and tested the order once so the next helper would not have to guess.

Fill in the circle next to the best answer.

1. What problem does Theo have at the shed?

- ☐ A. The soil is already soaked from the rain.
- ☐ B. The class card has no numbers on it.
- ☐ C. The lock will not open when he starts with the wrong number.
- ☐ D. The wheelbarrows are locked inside the classroom closet.

2. What mistake does Theo notice?

- ☐ A. He was starting with the last number, as on his gym lock.
- ☐ B. He left the card at home.
- ☐ C. He cleared the dial only after the lock had opened.
- ☐ D. He was using a key instead of the dial.

3. How does he help the next person?

- ☐ A. He changes the lock to match his gym lock.
- ☐ B. He hides the garden tools so nobody else needs the code.
- ☐ C. He leaves the shed unlocked all week.
- ☐ D. He hangs the card inside with an arrow for the first number.

Name: _____ Date: _____

Hector was selling tickets for the class play. He had sold what he thought was row C, but two families arrived with tickets for the same seats. The chairs were numbered, and the tickets were not. People stood in the aisle, polite but stuck. The show could not start with a double-sold row.

Hector stopped selling. He collected the row C tickets and wrote a seat number on each one, matching the chairs from left to right. One family had arrived first, so they kept C1 and C2. He moved the second family to two empty seats in row D and rewrote their tickets. He explained the change before they sat.

Then he numbered the rest of the unsold tickets to match empty chairs. No seat was promised twice. The aisle cleared, and the play began. Hector kept the seating map beside the ticket box for the next performance.

Fill in the circle next to the best answer.

1. What goes wrong with the tickets?

- ☐ A. Two families have tickets for the same seats.
- ☐ B. Hector sells every ticket before anyone arrives.
- ☐ C. Row C has no chairs in it.
- ☐ D. The play starts before the doors open.

2. How does Hector fix the double-sold row?

- ☐ A. He numbers the seats and moves one family to row D.
- ☐ B. He gives both families C1 and C2.
- ☐ C. He cancels the play and refunds nothing.
- ☐ D. He asks both families to stand for the show.

3. What does Hector do with the unsold tickets?

- ☐ A. He hides the seating map in the aisle.
- ☐ B. He throws them away so nobody else can sit.
- ☐ C. He numbers them to match the empty chairs.
- ☐ D. He sells them all as seat C1.

Name: _____ Date: _____

A robin hit the big classroom window and dropped to the mulch. Elena did not pick it up. She called Ms. Alvarez, who said the bird was stunned, not badly hurt, and needed quiet. They watched from inside. In a few minutes the robin shook itself and flew to the fence.

Elena still worried. The glass reflected the sky, so birds thought they could fly through. Ms. Alvarez brought a sheet of small dot stickers. Elena spaced them across the window, close enough that a bird would see the glass and not the open sky. She did not cover the whole view.

The next day a sparrow landed on the sill, looked at the dots, and flew along the building instead of at it. Elena wrote a note for the custodian asking that the stickers stay up through spring. The robin did not come back to the glass.

Fill in the circle next to the best answer.

1. What happens at the start of the story?

- ☐ A. Ms. Alvarez removes the window.
- ☐ B. A sparrow breaks the glass.
- ☐ C. Elena catches the robin and keeps it.
- ☐ D. A robin hits the window and is stunned.

2. Why do the birds fly at the window?

- ☐ A. Elena taps the glass to call them.
- ☐ B. The fence is painted the same color as the sky.
- ☐ C. The glass reflects the sky, so it looks open.
- ☐ D. The stickers attract them to the building.

3. What solution do Elena and Ms. Alvarez try?

- ☐ A. They ask the custodian to remove the stickers.
- ☐ B. They put dot stickers on the glass so birds can see it.
- ☐ C. They catch every bird that lands on the sill.
- ☐ D. They cover the window with a dark curtain all year.

Name: _____ Date: _____

Sam was making cornbread for the class breakfast, following Grandma's card. The batter tasted harsh and looked too yellow. He checked the card again. It said one teaspoon of salt. He had used the big spoon from the drawer, a tablespoon, three times as much. The pan was not in the oven yet, so the mistake was still fixable.

Grandma said not to bake that batch. They scraped it into the compost and washed the bowl. Sam set the teaspoon and the tablespoon side by side so he could see the difference. He measured the salt with the small spoon, leveled it, and showed Grandma before it went into the new batter.

The second pan came out golden, not harsh. Sam clipped the teaspoon to the recipe card with a note: small spoon. At breakfast the class ate the cornbread, and Sam did not have to apologize for a salty slice.

Fill in the circle next to the best answer.

1. What mistake does Sam make?

- ☐ A. He composts the good batch by accident.
- ☐ B. He leaves the salt out of the recipe.
- ☐ C. He bakes the cornbread before he reads the card.
- ☐ D. He uses a tablespoon of salt instead of a teaspoon.

2. Why can he still fix the batter?

- ☐ A. Grandma says salty cornbread is the goal.
- ☐ B. The pan is not in the oven yet.
- ☐ C. The class has already eaten the first pan.
- ☐ D. The tablespoon and teaspoon hold the same amount.

3. How does Sam keep from repeating the mistake?

- ☐ A. He writes that the big spoon is the right one.
- ☐ B. He stops making cornbread.
- ☐ C. He clips the teaspoon to the card with a note.
- ☐ D. He hides the teaspoon in the compost.

Name: _____

Date: _____

The team photo was in ten minutes, and Malik noticed his jersey number was pinned on upside down. From the stands, 6 would look like 9. Two other players had the same problem. A photo with wrong numbers would mix up the roster the coach had sent to families.

Malik did not peel the numbers off in a rush. He checked the coach's list, then looked in a mirror so he could see what the camera would see. His 12 was backwards. He unpinned it, turned it so the 1 came first, and pressed the pins flat. Then he helped the two teammates do the same.

The photographer lined them up. The numbers read correctly, left to right, even in the camera screen the coach checked. Malik smoothed his jersey. The picture would match the roster, and nobody would be called by the wrong number.

Fill in the circle next to the best answer.

1. What is wrong before the team photo?

- ☐ A. Malik's mirror shows a blank jersey.
- ☐ B. The photographer cancels the picture.
- ☐ C. The coach's roster has no names on it.
- ☐ D. Some jersey numbers are pinned on backwards.

2. How does Malik check his own number?

- ☐ A. He asks the people in the stands to shout his number.
- ☐ B. He looks in a mirror and compares it to the list.
- ☐ C. He turns every jersey inside out.
- ☐ D. He changes 12 to 21 on the roster.

3. How does the story end?

- ☐ A. Malik sits out so his number will not show.
- ☐ B. The coach throws the roster away.
- ☐ C. The photo is taken with the numbers upside down.
- ☐ D. The numbers read correctly in the camera.

Name: _____

Date: _____

Sofia was reshelving picture books when she noticed a row sorted by color. Red spines sat together, then blue, then green. The library did not work that way. Books were supposed to be in ABC order by the author's last name. A reader looking for Keats would never find it in the red row.

She pulled the mixed shelf onto a cart instead of shoving books in one by one. She said the authors' last names quietly and made stacks: A to G, H to P, and Q to Z. Then she slid each stack onto the shelf in order. A green book ended up beside a yellow one, and that was correct.

Sofia checked the first and last book on the shelf against the labels on the shelf edge. They matched. She told the librarian what she had fixed so the next helper would sort by name, not by the color of the spine.

Fill in the circle next to the best answer.

1. What is wrong with the shelf Sofia finds?

- ☐ A. Keats is supposed to be in the blue row.
- ☐ B. The books are grouped by color instead of by author.
- ☐ C. The librarian wants the red books separated.
- ☐ D. The cart is too small for one book.

2. How does Sofia reorganize the books?

- ☐ A. She puts every book on the cart and leaves the cart sitting there.
- ☐ B. She stacks them by the authors' last names, then shelves them.
- ☐ C. She shelves them by the picture on the cover.
- ☐ D. She sorts them into brighter and darker colors.

3. How does she know the shelf is right?

- ☐ A. The first and last books match the shelf labels.
- ☐ B. All the spines in a row are the same color.
- ☐ C. The librarian tells her color order is the rule.
- ☐ D. She hides the labels so nobody can check.

Name: _____ Date: _____

The rain barrel by the garden dripped from the spigot all morning. A muddy circle grew under it, and the barrel's water line sank. Cole needed that water for the tomatoes. If the drip continued, the barrel would be empty before the next rain.

He tried tightening the handle. The drip slowed but did not stop. A cracked washer sat inside the spigot, flat and split. Cole turned the water off at the barrel, unscrewed the spout the way Mr. Ellis showed him, and pressed in a new washer from the tool jar. He screwed the spout back on before he opened the flow.

One drop formed and did not fall. Cole set a bucket under the spigot anyway, in case the washer failed later. The water line stayed put through the afternoon. The tomatoes got a full can, and the mud began to dry.

Fill in the circle next to the best answer.

1. What problem does Cole notice?

- ☐ A. The tomatoes were watered too much yesterday.
- ☐ B. The tool jar has no spout at all.
- ☐ C. The rain barrel is dripping and losing water.
- ☐ D. Mr. Ellis removes the barrel from the garden.

2. Why doesn't tightening the handle fix it?

- ☐ A. The bucket is plugging the spout.
- ☐ B. A cracked washer inside the spigot still leaks.
- ☐ C. The handle breaks off in Cole's hand right away.
- ☐ D. The barrel is already empty.

3. What finally stops the drip?

- ☐ A. Cole puts in a new washer and screws the spout back on.
- ☐ B. He tightens the handle one more time and walks off.
- ☐ C. He leaves the water running into the mud.
- ☐ D. He throws the barrel away.

Name: _____ Date: _____

Amina's chorus started the song, and halfway through she knew they were flat. The melody sat lower than the recording they had practiced with. Faces looked unsure. If they pushed to the end that way, the high notes would croak.

She caught Mr. Ellis's eye and made a small stop sign with her hand, the signal they had agreed on for a restart. He nodded and gave the starting pitch on the piano, one clear note. Amina hummed it. The group hummed it back. They were higher than the first try, and the sound matched the pitch.

They began again. The high notes fit in their voices. After class Amina asked Mr. Ellis to give that pitch every time, even when the group thought they remembered it. He wrote Pitch first on the rehearsal plan. The next run started in tune.

Fill in the circle next to the best answer.

1. What is wrong with the first run of the song?

- ☐ A. Amina forgets the stop signal.
- ☐ B. The piano plays the song all the way through.
- ☐ C. The chorus starts too low and sounds flat.
- ☐ D. Mr. Ellis will not let them restart.

2. How does the group find the right pitch?

- ☐ A. Mr. Ellis plays the starting note and they hum it.
- ☐ B. Amina changes the melody to a lower song.
- ☐ C. They turn the recording off and guess.
- ☐ D. They keep singing until the low notes sound better.

3. What do they add to the rehearsal plan?

- ☐ A. A plan to skip the high notes
- ☐ B. A reminder to give the pitch before they sing
- ☐ C. A note to start lower than the recording
- ☐ D. A rule against restarting a song

Name: _____ Date: _____

Felix's group was building a timeline of their town, and the cards were in the wrong order. The library opening sat before the year the town was founded. A timeline that ran backward would confuse the visitors at the open house. The dates were on the cards, but nobody had sorted them.

Felix read each year aloud and the group made three piles: before 1900, 1900 to 1950, and after 1950. Inside each pile they ordered the cards from oldest to newest. One card had a blurry date. They checked the town booklet instead of guessing, and the year was 1924.

They clipped the cards to the board from left to right. Felix ran a finger along the years and they climbed, never jumped back. A visitor could start at the founding and walk forward. The blurry card got a fresh label so the next class would not have to squint.

Fill in the circle next to the best answer.

1. What is wrong with the timeline?

- ☐ A. The town booklet says the town was never founded.
- ☐ B. Felix removes every card from the board.
- ☐ C. The open house is canceled before they start.
- ☐ D. Events are clipped up in the wrong time order.

2. How does the group handle the blurry date?

- ☐ A. They check the town booklet instead of guessing.
- ☐ B. They change the year to 1900 without looking.
- ☐ C. They throw that card away.
- ☐ D. They put it first because it is hard to read.

3. How can a visitor tell the timeline is fixed?

- ☐ A. The founding sits at the far right.
- ☐ B. The years climb from left to right.
- ☐ C. The blurry card is left unlabeled.
- ☐ D. The cards are sorted by color.

Name: _____ Date: _____

Ivy was sorting the shoe drive when she opened a box marked Size 3. Inside were adult sneakers, much too big for the label. A family who asked for size 3 would go home with shoes they could not wear. The other boxes might be wrong too if people had packed in a hurry.

She did not relabel the box to match the sneakers and leave it. She emptied it, measured one shoe against the size chart, and wrote Size 8 on a new card. Then she checked five more boxes by looking inside, not just at the marker on the lid. Two more were mismatched. She fixed those labels too.

The size 3 box was used for the real size 3 shoes she found in the size 8 carton. Ivy taped the new cards on the front, where a helper would see them before lifting the lid. The pickup table finally matched what families asked for.

Fill in the circle next to the best answer.

1. What is wrong with the shoe box?

- ☐ A. The size chart is missing from the room.
- ☐ B. Families asked only for size 8.
- ☐ C. It is marked size 3 but holds adult sneakers.
- ☐ D. Ivy throws the sneakers away.

2. What does Ivy do besides fixing that one box?

- ☐ A. She trusts the marker written on each lid.
- ☐ B. She closes the shoe drive.
- ☐ C. She relabels every box as size 3.
- ☐ D. She checks five more boxes by looking inside.

3. Where does she put the new labels?

- ☐ A. On the size chart instead of the boxes
- ☐ B. On the front, so helpers see them before opening the box
- ☐ C. Inside the shoes, where nobody will think to look
- ☐ D. Under the table for the next drive

Name: _____ Date: _____

Mei's group was walking a compass course on the field. The first arrow said north, but the needle pointed at the bleachers and would not settle. If they followed that twitch, they would walk off the course. The map in Mei's hand did not match what the compass claimed.

Mr. Chen asked what was near the needle. Mei looked down. She was holding the compass against the metal clipboard. She stepped two paces away, held the compass flat in her palm, and waited. The needle swung, slowed, and pointed the same way as the sun-shadow trick Mr. Chen had taught that morning.

They started the course again from the cone, not from the bleachers. Mei kept the clipboard in her other hand, far from the compass. Every turn matched the map. She wrote on the course card: Metal moves the needle. Stand clear.

Fill in the circle next to the best answer.

1. What problem does Mei have with the compass?

- ☐ A. The map shows a course with no cones.
- ☐ B. The sun-shadow trick points south only.
- ☐ C. The needle points at the bleachers and will not settle.
- ☐ D. Mr. Chen tells the group to follow the bleachers.

2. What is pulling the needle off course?

- ☐ A. Mei reads the map upside down.
- ☐ B. The cone is buried under the field.
- ☐ C. The metal clipboard is too close to the compass.
- ☐ D. The bleachers are marked north on the map.

3. How does the group get back on the course?

- ☐ A. They change the map so north is the bleachers.
- ☐ B. Mei holds the compass away from the clipboard and restarts.
- ☐ C. They walk toward the bleachers and stop there for good.
- ☐ D. They throw the compass away and guess.

Name: _____

Date: _____

Noor's article for the class paper was finished, but the headline said Big Day. Readers would not know if the story was about the field trip, the game, or the bake sale. A headline has to tell what happened before anyone reads the first sentence. Big Day could mean anything.

Mr. Patel asked her what the article was mostly about. Noor said the third grade had collected 214 books for the library drive. He nodded and waited. She crossed out Big Day and wrote Third Grade Collects 214 Books. The number and the grade were both in the article, so the headline did not add a new fact.

She read the headline and the first sentence together. They agreed with each other. Mr. Patel set the article in the paper. Students who only glanced at the page still learned what the third grade had done.

Fill in the circle next to the best answer.

1. What is weak about Noor's first headline?

- ☐ A. It states a number that is not in the article.
- ☐ B. The library drive has not happened yet.
- ☐ C. Mr. Patel writes it before Noor finishes the story.
- ☐ D. Big Day does not say what happened.

2. What is the article mostly about?

- ☐ A. The field trip was canceled.
- ☐ B. The bake sale sold 214 cookies.
- ☐ C. The game ended in a tie.
- ☐ D. Third grade collected 214 books.

3. Why does the new headline work?

- ☐ A. It is shorter than Big Day.
- ☐ B. It names the grade and the number of books.
- ☐ C. It hides the story from readers who glance.
- ☐ D. It adds facts that are not in the article.

Name: _____ Date: _____

Omar was testing the microphone for the morning announcements when a screech burst from the speaker. He jumped and switched the mic off. The office filled with the leftover ring. If that happened during announcements, the whole school would hear it.

Ms. Nguyen said the mic was too close to the speaker, so the sound was looping back into itself. Omar moved the mic to the far side of the desk and pointed it away from the speaker. He turned the volume down one notch. Then he switched the mic on and said one sentence in a normal voice.

The sentence came out clear, with no screech. Omar marked the desk with a bit of tape where the mic should stand. He wrote the volume number on the tape. The next announcer would not have to learn the hard way.

Fill in the circle next to the best answer.

1. What happens when Omar tests the microphone?

- ☐ A. Ms. Nguyen turns the volume all the way up.
- ☐ B. A screech comes from the speaker.
- ☐ C. The mic will not switch on.
- ☐ D. The announcements play perfectly the first time.

2. Why does the screech happen?

- ☐ A. Omar speaks too quietly into the mic.
- ☐ B. The mic is so close that the speaker's sound loops into it.
- ☐ C. The office speaker is unplugged.
- ☐ D. The tape on the desk is what blocks the speaker cone.

3. How does Omar keep the next announcer from causing the screech?

- ☐ A. He marks where the mic should stand and writes the volume.
- ☐ B. He turns the speaker to face the mic.
- ☐ C. He tells the next announcer to stand as close as possible.
- ☐ D. He hides the microphone in a drawer.

Name: _____ Date: _____

Lucy's celery was supposed to turn blue as it drank colored water. After an hour the leaves were still pale. Other cups on the windowsill were already streaked. If her setup was wrong, her notes would show that celery does not drink, which she did not think was true.

She looked at the cut end. It was dry and brown because she had cut the stalk yesterday. The fresh stalks had pale, wet ends. Lucy cut a new slice off the bottom, set the stalk in the blue water again, and wrote the new start time. She did not add more dye. Only the cut had changed.

By the end of class a blue line had climbed the stalk. Lucy drew it in her log and wrote that a fresh cut lets the water in. The old brown end had been the problem, not the celery and not the dye.

Fill in the circle next to the best answer.

1. What is Lucy's problem?

- ☐ A. The dye is missing from every cup.
- ☐ B. Her celery stays pale while the other stalks turn blue.
- ☐ C. The windowsill cups were never part of the test.
- ☐ D. She adds too much dye and hides the result.

2. What does she change?

- ☐ A. She cuts a fresh end and keeps the same dye.
- ☐ B. She pours out the blue water and uses clear water.
- ☐ C. She replaces the celery with a paper towel.
- ☐ D. She moves her cup into a dark closet.

3. What does Lucy decide caused the problem?

- ☐ A. Celery cannot drink colored water.
- ☐ B. The other students used a different plant.
- ☐ C. The dye was the wrong color.
- ☐ D. The old brown cut would not let water in.

Name: _____ Date: _____

Camila's group was ready to present their book report when the slides came up in the wrong order. The ending showed first, then the title, then the middle of the plot. Classmates would hear the solution before they knew the problem. The pictures themselves were fine. Only the order was scrambled.

Camila did not present that way. She opened the slide sorter and dragged the title to the front. She put the problem next, then the three events in the order the book told them, and the ending last. Her partner read the titles aloud. They matched the note cards in Camila's hand.

They started the presentation over. The class followed the story from the beginning. Afterward Camila locked the slide order so a click could not shuffle it. The ending stayed at the end, where it belonged.

Fill in the circle next to the best answer.

1. What is wrong with the slides?

- ☐ A. They are in an order that shows the ending first.
- ☐ B. The pictures are missing from every slide.
- ☐ C. The class has already heard the report.
- ☐ D. Camila's note cards do not match the book.

2. How does Camila fix the order?

- ☐ A. She asks the class to ignore the screen.
- ☐ B. She deletes the ending and the title.
- ☐ C. She drags the slides to follow the note cards.
- ☐ D. She reads the ending and skips the rest.

3. What does she do so the slides will not scramble again?

- ☐ A. She puts the ending back at the front.
- ☐ B. She presents without any slides.
- ☐ C. She throws the note cards away.
- ☐ D. She locks the slide order.

Name: _____ Date: _____

Jordan turned on the garden hose, and water sprayed from the connector at the spigot instead of from the nozzle. His shirt was soaked, and the tomato row was still dry. Tightening the connector with his hand only made the spray fan wider. The watering time was almost over.

He shut the water off and unscrewed the hose. A rubber washer inside the connector was cracked and thin. Jordan got a spare from the shed jar, pressed it flat into the fitting, and screwed the hose on until it was snug. He did not crank it with a tool. Hand-tight was what the diagram on the jar said.

He turned the water on slowly. The connector stayed dry, and the nozzle sent a steady stream onto the soil. Jordan put the cracked washer in the trash so nobody would reuse it. The row got its water before the bell.

Fill in the circle next to the best answer.

1. What happens when Jordan turns on the hose?

- ☐ A. The shed jar is empty of every fitting.
- ☐ B. The bell rings before he even reaches the garden row.
- ☐ C. Water sprays from the connector instead of the nozzle.
- ☐ D. The nozzle waters the tomatoes perfectly.

2. What does he find inside the connector?

- ☐ A. The nozzle, screwed in backward
- ☐ B. A new washer that already fits
- ☐ C. A tool he uses to crank the hose
- ☐ D. A cracked, thin rubber washer

3. How does Jordan know how tight to make the hose?

- ☐ A. The diagram says hand-tight, not tool-tight.
- ☐ B. He cranks it until the spray comes back.
- ☐ C. He reuses the cracked washer to be safe.
- ☐ D. He leaves the connector loose on purpose.

Name: _____ Date: _____

The choir walked on stage and Ben could not see the director. A taller student stood directly in front of him. Ben's note would be late if he could not see the hands that showed when to start. The row had lined up by who walked in first, not by height.

Ms. Brooks stopped the entrance and asked the row to step backstage. She had them stand in a fresh line from shortest to tallest. Ben ended up second, where the director's hands were easy to see over the person in front. They marked the floor with small bits of tape so the next entrance would match.

They walked out again. Ben saw the cue and came in with the choir. After the song he helped pick up the tape and stick it in the folder labeled Row order. The next rehearsal started in that line, and nobody's view was blocked.

Fill in the circle next to the best answer.

1. What problem does Ben have on stage?

- ☐ A. A taller student blocks his view of the director.
- ☐ B. He is the tallest singer in the choir.
- ☐ C. The tape marks put him in the back on purpose.
- ☐ D. Ms. Brooks cancels the song.

2. How does the row reorganize?

- ☐ A. They sort themselves by the first letter of their names.
- ☐ B. Ben moves to the back so he can hide.
- ☐ C. They stay in the order they walked in.
- ☐ D. They line up from shortest to tallest.

3. What helps the next rehearsal start in the right order?

- ☐ A. Ms. Brooks removes the director's cues
- ☐ B. Ben skips the entrance
- ☐ C. Floor tape and a folder labeled Row order
- ☐ D. A rule that the tallest singer stands in front

Name: _____ Date: _____

Leo's science board stood up in the kitchen and fell flat on the way to school. The hinge he had taped was too soft, so the board folded every time he stopped walking. Judges would not read a project that kept collapsing on the table.

Dad said tape alone would not hold a hinge. They cut a triangle of cardboard to brace the back, the way a picture frame uses a stand. Leo glued the triangle along one side and held it until the glue set. He did not add a second project. He only changed the stand.

On the table at school the board stayed upright, even when a student bumped the next display. Leo could point to his chart without catching the board. He left the cardboard brace on for the whole fair. A soft tape hinge had been the weak part, and the triangle fixed it.

Fill in the circle next to the best answer.

1. What happens to Leo's science board?

- ☐ A. Dad throws it out before school.
- ☐ B. The judges read the board while it is still at home.
- ☐ C. It folds and falls because the taped hinge is too soft.
- ☐ D. A cardboard triangle makes it fall faster.

2. What do Leo and Dad add?

- ☐ A. More tape on the same soft hinge
- ☐ B. A heavier book to weigh the board down
- ☐ C. A second project taped to the front
- ☐ D. A cardboard triangle that braces the back

3. How does Leo know the brace works?

- ☐ A. The board falls flat again as soon as he lets go.
- ☐ B. The board stays up even when the next display is bumped.
- ☐ C. The judges ask him to lay it flat.
- ☐ D. He holds it upright for the whole fair.
